What should I
bring to class?

A laptop – once enrolled, you will be able to download the digital resources that support the day's learning; alternately, you can download and print the paper versions if you are more comfortable working with the old-school tools of the trade.

If you'd like to bring a keep-cup and/or refillable bottle, we provide all-day tea, coffee and water; and if you don't want to bring your own lunch, there are plenty of nearby food options.

ENABLING INNOVATION

Innovation is successful change
Projects are how we deliver it

INTEGRATING AGILE

CENTER FOR
**PROJECT
INNOVATION**

Why should I take this Masterclass?

Agile is a method of project management that has gained popularity in recent years due to its ability to uncover and remedy client expectations early and deal with an ever-evolving scope of work.

This introductory Masterclass is designed for anyone in a project environment who is looking for a lean yet structured approach to management that enables faster response to change and that is conducive to the rapid and collaborative implementation of high-priority initiatives.

What will I learn in one day?

We get that adults have distinctly different motivations to learn, so we ensure our content is relevant, learners are engaged, learning processes are active and delivery is centred around **you**.

In this one-day Masterclass you will get an introduction to the agile project management processes that can help optimise your performance.

You will also learn the fundamentals of agile at each of the major project phases and which agile artefacts can best be integrated into 'traditional' project management methods.

Who will be teaching me?

Our Certified Project Trainers are:

- proven industry expert with over 10 years' practical experience leading complex projects, programs and portfolios of work
- inspiring communicators
- creative and critical thinkers, and
- trained educators, facilitators and mentors.

Importantly, they are not professional lecturers who only learned project management from text-books – they superimpose on the content a wealth of project skill and experience from all stakeholder perspectives that bring project management to life.
